We have mentioned that children solve addition and subtraction problems by focusing on the action in the problem. We illustrated joining problems where the action is a joining of two or more quantities (like 6 toy cars and 18 more toy cars). The opposite of joining is separating. In many word problems the action involves separation of quantities. For example, Louise has 36 cookies and gives 12 to Henry (12 cookies are separated from the original quantity of 36).

A Subtraction Example – the Split Strategy. I teach the addition and subtraction strategies the same way. I start my mini-lesson with base ten blocks to demonstrate splitting the minuend and subtrahend. However, in the subtraction strategy, I have students use sticky notes also to mark the numbers throughout the process.
