BS 7608 is a code of practice for the design of steel structures and covers the general aspects of fatigue design of fabricated steel elements. It provides general recommendations for parts of structures that are subject to repeated fluctuations of stress and covers wrought structural steel with yield strength up to 700 N/mm<sup>2</sup> operating in sub-creep regime.

BS 7608. The British Standard “ BS 7608: Guide to fatigue design and assessment of steel products ” gives methods for assessing the fatigue life of parts of steel products that are subjected to repeated fluctuations of stress. It is applicable to a large number of industrial fields. The codes includes the standard stress concepts and also defines different Finite Element modelling techniques for the fatigue assessment.

BS 7608 Welds Technical Background. Welds may be analyzed with any fatigue method, stress-life, strain-life or crack growth. Use of these methods is difficult because of the inherent uncertainties in a welded joint. For example, what is the local stress concentration factor for a weld where the local weld toe radius is not known?
