Discusses all cerebrovascular diseases to help you differentiate among all types of stroke so you can treat each patient appropriately. Takes a distinctly personal and individual approach to general principles, pathophysiology, diagnosis, treatment, and rehabilitation, offering practical, clinical guidance on stroke and stroke related issues. Provides detailed discussions on stroke syndromes in children and adults, including large artery occlusive disease of the anterior circulation, brain embolism, spinal cord stroke, and many, many more, to help you better manage every condition you see. Uses case studies to highlight and emphasize clinical points. Includes expanded coverage of imaging and laboratory diagnosis and treatment to help you make better informed evaluation and management decisions. Presents meticulous revisions and updates throughout, particularly to the chapters on stroke prevention and rehabilitation to keep you current on today's best practices. Features a new two-color design with updated artwork and more images that elucidates key points and enhances visual guidance.

Part of the "What Do I Do Now?" series, Stroke uses a case-based approach to cover common and important topics in the diagnosis and treatment of stroke. Each chapter provides an overview of the approach to the problem in question followed by a discussion of the diagnosis, key points to remember, and selected references for further reading. For this edition, all cases have been carefully revised, and new information and references have been added. Stroke is an engaging collection of thought-provoking cases which clinicians can utilize when they encounter difficult patients on the ward or in the clinic. The volume is also a self-assessment tool that tests the reader's ability to answer the question, "What do I do now?"

Most strokes are attributed to atherosclerosis of neck and intracranial arteries, brain embolism from the heart, and penetrating artery disease; these are discussed in detail in many other books. This compendium fills an important niche by providing authoritative discussions on the other, less common causes of stroke, including various forms of angiitis, coagulation disorders, infective, paraneoplastic and metabolic disorders that may be associated with stroke, and a number of rare syndromes such as Eales disease and Fabry's disease. This new edition contains detailed, up-to-date information about the nature, diagnosis, and treatment of those relatively uncommon types of cerebrovascular disease that cause strokes. It is therefore a unique scientific and clinical resource that provides a useful reference to help physicians diagnose and treat stroke patients who do not fit well into the usual clinical categories. New chapters include stroke in patients with Lyme disease, scleroderma, Cogan's syndrome, Chagas' disease, and HIV.

Preceded by Stroke treatment and prevention: an evidence-based approach / Graeme J. Hankey. 2005.

Offered in print, online, and downloadable formats, this updated edition of Stroke: Pathophysiology, Diagnosis, and Management delivers convenient

access to the latest research findings and management approaches for cerebrovascular disease. Picking up from where J. P. Mohr and colleagues left off, a new team of editors - Drs. Grotta, Albers, Broderick, Kasner, Lo, Mendelow, Sacco, and Wong - head the sixth edition of this classic text, which is authored by the world's foremost stroke experts. Comprehensive, expert clinical guidance enables you to recognize the clinical manifestations of stroke, use the latest laboratory and imaging studies to arrive at a diagnosis, and generate an effective medical and surgical treatment plan. Abundant full-color CT images and pathology slides help you make efficient and accurate diagnoses. Data from late-breaking endovascular trials equips you with recent findings. Includes comprehensive coverage of advances in molecular biology of cell death; risk factors and prevention; advances in diagnostics and stroke imaging; and therapeutic options, including a thorough review of thrombolytic agents and emerging data for endovascular therapy. Features brand-new chapters on Intracellular Signaling: Mediators and Protective Responses; The Neurovascular Unit and Responses to Ischemia; Mechanisms of Cerebral Hemorrhage; Stroke Related to Surgery and Other Procedures; Cryptogenic Stroke; and Interventions to Improve Recovery after Stroke. Highlights new information on genetic risk factors; primary prevention of stroke; infectious diseases and stroke; recovery interventions such as robotics, brain stimulation, and telerehabilitation; and trial design. Details advances in diagnostic tests, such as ultrasound, computed tomography (including CT angiography and CT perfusion), MRI (including MR perfusion techniques), and angiography. Includes extracted and highlighted evidence levels. Expert Consult eBook version included with print purchase. This enhanced eBook experience allows you to search all of the text, figures, and references on a variety of devices. The content can also be downloaded to tablets and smart phones for offline use.
