This chapter discusses the selection of an iterative method that can be used in solving the large linear system $Au = b$ (1), where A is a large sparse positive definite matrix. It also highlights the case where the system (corresponds to the finite difference solution of a self-adjoint elliptic partial differential equation.

Iterative Solution of Large Linear Systems | ScienceDirect

Abstract Solving sparse systems of linear equations is at the heart of scientific computing. Large sparse systems often arise in science and engineering problems. One such problem we consider in this paper is the steady-state analysis of Continuous Time Markov Chains (CTMCs).
