Hackers can attack servers with viruses that exploit the vulnerabilities of the system. In addition to your server, hackers can attack email, web downloads, flash drives and older computers that have CD-ROMs. Antivirus software can not only protect a dental office's server and machines, it can alert users of any threats. It's important to regularly update antivirus software, as hackers find ways to create new threats once they understand how they are being blocked from patient information.

This new text-workbook provides an overview of dental office operations and instructions in dental insurance billing procedure. Instruction is based on MediSoft's PractiSoft Advanced, version 6.0 software.

Dental Office Administration is a comprehensive resource that details the responsibilities of the dental office professional, providing practical communication techniques and tips for problem solving. It also provides the necessary clinical background information every dental office professional needs for a successful practice. Hands-on activities within the text require students to practice common tasks, such as dental charting, writing a memo, or conducting a mock telephone call with another student. A free bonus DVD-ROM for Windows includes practice management software called 'DENTRIXG4 practice management' to give students 'real world' experience managing patient data and filing electronic claims. A companion Website includes the full text and a quiz bank.
