When researching, teaching or working with information systems in the public sector, one is left with few or often no textbooks that provide useful case studies or surveys on the implementation and effects of integrating information technologies in the organizations' operations. This is surprising since in most first world countries the public sector consumes a substantial part of the gross national product. Even more astonishing is the vast amount of financial and organizational resources that are spent developing and implementing various information systems. We decided to write this book to provide information for those studying information systems at business schools, information and computer departments at colleges/ universities, and for those working hands-on with EDI and data networking in public administration. Thus, our primary target groups for this book are professionals, training (MA-courses), computer science, MBA, MP A, and political science. EDI has been seen as a means to wire the various policy areas in the public sector. Those included are not limited strictly to the public organizations, but extend to their trade partners. Also, government has sought ways to stimulate the usage of EDI in the private sector beyond those transactions involving direct communication with the public sector. In this book, we have contributors from eight countries and a total of 14 chapters reporting on issues of importance when developing and implementing EDI, when government wants to stimulate the diffusion of EDI in society, and when organizations want to address the impact of their investments in EDI.

This book documents the research I conducted on the subject of Electronic Data Inter change during my time at the Institute of Business Informatics, University of Berne, Switzerland. In this effort I enjoyed a great deal of help from numerous others, including professional colleagues, interview partners, and members of my family. Even though I cannot possibly mention them all, I would like to express my sincere gratitude for their selfless support. Above all, I am grateful to Prof. Dr. Gerhard Knolmayer who contributed to the book both in its formative stages and throughout its development. He has been an unwavering source of encouragement during the many difficult stages of the investigation and I greatly benefitted from our discussions of the subject matter. Moreover, he was extremely generous with his time in carefully reviewing all the five chapters. The financial support for this book came from the Hasler Foundation in Berne. I wish to thank the Foundation, and especially its Managing Director, Dr. P.A. Jaeger, for funding the empirical part of the research project. Likewise, I am grateful to the University of Berne for providing me with the necessary computer and other resources. The Institute of Business Informatics should be commended particularly for its very stimulating work environment.

An invaluable aid to executives seeking to benchmark their organizations against the best time-based competitors in the world.
