Material Flow Cost Accounting (MFCA) combines physical flows and monetary units and is located between energy and material efficiency analyses, environmental management and managerial accounting procedures.

[Material Flow Cost Accounting - looking back and ahead...](#)

ABC allocates internal costs to cost centres and cost drivers on the basis of the activities that give rise to the costs. In an environmental accounting context, it distinguishes between environment-related costs, which can be attributed to joint cost centres (e.g. incinerators and sewage plants), and environment-driven costs, which tend to be hidden on general overheads, e.g. increased depreciation or higher cost of staff.
