Statistics 5021 – Homework 2 (solutions) There are 20 total points (1 point for each part of each question). One question will be graded for correctness. This homework is due Thursday, February 10 in your lab section.

Homework 2 solutions - Statistics 5021 Homework 2 ...

Answer: $P(A \cap B) = P(A \cap B) / P(B) = 0.25 / 0.60 = 0.4167$, and $P(A) = 0.40$. Since $P(A \cap B) \neq P(A)P(B)$, we conclude that the two events are dependent.

Homework 2 solution - STAT 420 Methods Of Applied ...

Actively solving practice problems is essential for learning probability. Strategic practice problems are organized by concept, to test and reinforce understanding of that concept. Homework problems usually do not say which concepts are involved, and often require combining several concepts. Each of the Strategic Practice documents here contains a set of strategic practice problems, solutions ...

Statistics 100A Homework 2 Solutions - UCLA Statistics ...

Let P^c be the complement of event P . (i.e. P^c is the event of living above the poverty line). Then, $P(P^c | N^c) = P(N^c) - P(P | N^c) = (1 - 0.207) - 0.104 = 0.689$. so the answer is 68.9%. If P and N are independent, $P(P | N) = P(P) \times P(N)$. $P(P | N) = 0.042$. $P(P) \times P(N) = 0.146 \times 0.207 = 0.030$.
