Introduction To Time Series And

Time series is a sequence of data points in chronological sequence, most often gathered in regular intervals. Time series analysis can be applied to any variable that changes over time and generally speaking, usually data points that are closer together are more similar than those further apart.

There are several key areas in the field of machine learning where time plays an important part in accordance to the data. so, As all the statistics data is concern the time series data is collected from the real life thing that we are interest in at the particular time.

Time series are used for :
forecasting. estimating
causal effects. estimating
correlation over time. We'll
define the following
notations : The value of y
at time t is given by y_t .
The data points are :
 y_1, \dots, y_T . The
first difference is given by
: $\Delta y_t = y_t - y_{t-1}$
 $\Delta y_t = y_t - y_{t-1}$. II.
