which can be written $C = \frac{1}{\sqrt{2}}(i + j + k)$
Geometrically, C can be perpendicular to both A and B only if C is perpendicular to the plane determined by A and B. From the standpoint of vector algebra, this implies that $C \cdot A = 0$ and $C \cdot B = 0$. To prove this, evaluate $A \cdot B$. $A \cdot B =$

Here is a summary of the basic algebra of vectors. $C = bA$ $A - A$ $A + B$ B 1.3.1 Multiplying a Vector by a Scalar If we multiply A by a simple scalar, that is, by a simple number b , the result is a new vector $C = bA$. If $b > 0$ the vector C is parallel to A , and its magnitude is b times greater. Thus $C^{\wedge} = A^{\wedge}$, and $C = bA$.
