Management ...

A logistics management information system (LMIS) is a system of records and reports – whether paper-based or electronic – used to aggregate, analyze, validate and display data (from all levels of the logistics system) that can be used to make logistics decisions and manage the supply chain. LMIS data elements include stock on hand, losses and adjustments, consumption, demand, issues, shipment status, and information about the cost of commodities managed in the system.

~~Logistics Management Information Systems (LMIS)~~

The logistics management information system (LMIS) collects and provides data on healthcare commodities that are routinely supplied to health facilities (Routine Health Information Network, n.d.). The primary purpose of the LMIS is to manage the logistics of ensuring a smooth supply chain and that the data it generates are also relevant
