Many students continue to struggle in high school math courses because they failed to master the basic mathematical skills. REA's new Ready, Set, Go! Workbook series takes the confusion out of math, helping students raise their grades and score higher on important exams. What makes REA's workbooks different? For starters, students will actually like using them. Here's why: Math is explained in simple language, in an easy-to-follow style The workbooks allow students to learn at their own pace and master the subject More than 20 lessons break down the material into the basics Each lesson is fully devoted to a key math concept and includes many step-by-step examples Paced instruction with drills and quizzes reinforces learning The innovative “Math Flash” feature offers helpful tips and strategies in each lesson—including advice on common mistakes to avoid Skill scorecard measures the student's progress and success Every answer to every question, in every test, is explained in full detail A final exam is included so students can test what they've learned When students apply the skills they've mastered in our workbooks, they can do better in class, raise their grades, and score higher on the all-important end-of-course, graduation, and exit exams. Some of the math topics covered in the Geometry Workbook include: Basic Properties of Points, Rays, Lines, and Angles Measuring Line Segments and Angles Perimeter of Polygons Triangles Circles Quadrilaterals and more! Whether used in a classroom, for home or self study, or with a tutor, this workbook gets students ready for important math tests and exams, set to take on new challenges, and helps them go forward in their studies!

Understanding the Sociology of Health continues to offer an easy to read introduction to sociological theories essential to understanding the current health climate. Up-to-date with key policy and research, and including case studies and exercises to critically engage the reader, this book shows how sociology can answer complex questions about health and illness, such as why health inequalities exist. To better help with your studies this book contains: · a global perspective with international examples; · a new chapter on health technologies; · online access to videos of the author discussing key topics as well as recommended further readings; · a glossary, chapter summaries and reflective questions to help you engage with the subject. Though aimed primarily at students on health and social care courses and professions allied to medicine, this textbook provides valuable insights for anyone interested in the social aspects of health.

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
