The X-ray equipment maintenance and repairs workbook is intended to help and guide staff working with, and responsible for, radiographic equipment and installations in remote institutions where the necessary technical support is not available, to perform routine maintenance and minor repairs of equipment to avoid break downs. The book can be used for self study and as a checklist for routine maintenance procedures.

This publication is aimed at students and teachers involved in programmes that train medical physicists for work in diagnostic radiology. It provides, in the form of a syllabus, a comprehensive overview of the basic medical physics knowledge required for the practice of modern diagnostic radiology. This makes it particularly useful for graduate students and residents in medical physics programmes. The material presented in the publication has been endorsed by the major international organisations and is the foundation for academic and clinical courses in both diagnostic radiology physics and in emerging areas such as imaging in radiotherapy.

I hope this book, which covers the Equipment section of With the help of the Superintendent find out which quality the DCR and HDCR syllabuses, will be of help not only assurance tests are carried out on the equipment and ask to those students preparing for these examinations, but for permission to participate in the procedures. also for those taking the modular HDCR to be introduced Remember, radiography is a practical subject - learning sometime in the near future, and indeed to those returning from books is of little value unless you apply it to the to radiography after a break in service. work you are doing - unless of course you are preparing in addition to reading a wide range of technical litera for a change of job or promotion! ture, I would hope that students will relate this knowledge Finally, whether you are using this book to refresh your to the equipment they use in the Department. For example knowledge prior to returning to radiography after a break what type of equipment are they using? Who was the in service, or as part of your preparation for the DCR or manufacturer? What sort of generator is it? What inter HDCR, or indeed if you are using it in conjunction with locks are present? What is the maximum loading of the a distanced learning course. may I wish you good luck and tube? Is it a falling load generator? success in your endeavours.
