## QUALITY OF LIFE (WHOQOL) -BREF

WHO Quality of Life-BREF (WHOQOL-BREF) The World Health

Organization Quality of Life (WHOQOL) project was initiated in

1991. The aim was to develop an international cross-culturally

comparable quality of life assessment instrument. It assesses the

individual's perceptions in the context of their culture and value

systems, and their personal goals, standards and concerns.

## WHO | WHO Quality of Life-BREF (WHOQOL-BREF)

domains 1 and 3, and also merging domains 2 and 6, thereby creating four domains of quality of life. In our current approach to scoring the WHOQOL-BREF, these domains have been merged therefore and four major domains are assessed: physical, psychological, ...

WHO | WHOQOL: Measuring Quality of Life

WHOQOL-BREF Introduction, Administration, Scoring and Generic Version of the Assessment Introduction The WHOQOL-100 quality of life assessment was developed by the WHOQOL Group with fifteen international field centres, simultaneously, in an attempt to develop a quality of life assessment that would be applicable cross-culturally.

WHOQOL-BREF INTRODUCTION, ADMINISTRATION, SCORING AND ...

WHOQOL-BREF is an abbreviated generic Quality of Life Scale developed through the World Health Organization. The SeaQoL Group is the location of the US WHOQOL Center and distributes the US English version of the WHOQOL-100 and WHOQOL-BREF. Our office handles the US English version only. If you are interested in translations of the WHOQOL-BREF instrument, please contact the World Health Organization (WHO) field center WHOQOL instrument coordinator.

World Health Organization Quality of Life Instruments ...

The WHOQOL-BREF measures quality of life across 4 domains (Physical Health, Psychological, Social Relationships, and Environment). The measure is calculated by summing the point values for the questions corresponding to each domain and then transforming the scores to a 0-100 point interval, or alternatively, a 4-20 point interval (see 'Supporting literature' for more information on this ...

Quality of Life in Patients with Type 2 Diabetes ...

The WHOQOL-BREF instrument, developed by the World Health Organization (WHO), measures four domains of quality of life: physical, psychological, social and environmental with its 26 items. It was devised from a cross-cultural methodology to be used in epidemiological studies and in transcultural investigations [ 5, 6 ].

The aim of this encyclopedia is to provide a comprehensive reference work on scientific and other scholarly research on the quality of life, including health-related quality of life research or also called patient-reported outcomes research. Since the 1960s two overlapping but fairly distinct research communities and traditions have developed concerning ideas about the quality of life, individually and collectively, one with a fairly narrow focus on health-related issues and one with a quite broad focus. In many ways, the central issues of these fields have roots extending to the observations and speculations of ancient philosophers, creating a continuous exploration by diverse explorers in diverse historic and cultural circumstances over several centuries of the qualities of human existence. What we have not had so far is a single, multidimensional reference work connecting the most salient and important contributions to the relevant fields. Entries are organized alphabetically and cover basic concepts, relatively well established facts, lawlike and causal relations, theories, methods, standardized tests, biographic entries on significant figures, organizational profiles, indicators and indexes of qualities of individuals and of communities of diverse sizes, including rural areas, towns, cities, counties, provinces, states, regions, countries and groups of countries.

2004 AJN BOOK OF THE YEAR AWARD WINNER! This Text Facilitates Researching Clinical Concepts And Will Enhance The Focus On Linking Clinical Variable Assessments With Routine Measurement Of Everyday Clinical Interventions. With This Book, Students Will Be Able To: Review Available Instruments That Measure Select Clinical Phenomena; Review Selected Studies Employing Each Tool; Identify An Instrument ' S Strengths And Weaknesses; And Develop Instruments For Cross-Cultural Research.

It ' s a core issue at the heart of elder care: while best-practice data exist for long-term care, quality of life as a concept, measure and standard for care outcomes remains elusive. The result of an ambitious European research initiative, the Care Keys Project addresses quality of life issues among frail, care-dependent seniors, taking their social as well as health needs into account. This resulting volume explains the theory behind Care Keys, its methodology, empirical findings, and practical considerations in promoting effective, efficient elder care aimed at social and emotional well-being and including disabled and cognitively impaired patients.

This special issue of the journal Aphasiology is dedicated to the topic of quality of life in aphasia.

Background: For the implementation of preventive and interventive public health policies in a developing country, such as Brazil, it is important that individuals participate in the discussion of proposals for designing a health public policy. For this reason, assessing the individual's perception of their quality of life is crucial. At the same time, it is necessary to find alternatives to assess a great number of people in order to diminish costs and optimizing time. Purpose: Assessing the quality of life of public servants in a southeastern Brazilian city and analyzing the internal consistency, validity and

# Read Online Quality Of Life Whoqol Bref

reliability of The web-form of WHOQOLBREF. Method: 565 public servants participated, 29% male, 71% female, 56.8% are between 41 and 60 years old. WHOQOLBREF which is an instrument for data collection regarding quality of life was used in a web-form. This instrument assesses the individuals' 2019 perception of their position in life in various contexts: environmental, physical, psychological and social domain. Conclusion: The internal consistency of the instrument items, assessed by stratified Cronbach's alpha, was high ( $> 0.91$ ) in all the domains evaluated. WHOQOL-BREF showed to be an economic and fast way of collecting data in developing countries such as Brazil.

The EUROHIS project has focused on the comparability of health surveys and has uncovered some of the problems that arise when attempts are made to compare data from different countries. Of course, similar problems of cross-cultural comparability also arise when comparing data from other sources, such as health registers, and are just as complex and difficult to tackle. One of the main advantages of health surveys, however, is the relatively low cost and time involved in adapting them according to the needs of health policy-makers. The output from the EUROHIS project provides researchers and policy-makers with a set of recommended common instruments for the measurement of eight health indicators. The development of these instruments has required careful consideration of relevant common concepts and how these should be defined and operationalized. The instruments are freely available for use by all countries, with the aim of enhancing national health information systems and facilitating cross-national comparisons of health data.

This is the first introductory text to offer a critical overview of the concept of quality of life and the ways in which it is researched. Using an inter-disciplinary approach, the book covers every aspect of the concept and its application.

A fascinating and worthy text that presents new insights into a hugely important area of mental health. Health-related quality of life (HRQL) impairment is a core domain of prevalent mental disorders such as schizophrenia, schizoaffective, mood and anxiety disorders. The authors present a new conceptual framework for this field by explaining how HRQL impairment arises from interactions between various multidimensional factors. They suggest several ways in which further research could enhance our understanding of HRQL impairment, its biological basis, and its relevance to psychopathology.
