SCIENCE FROM FISHER

INFORMATION The aim of this

book is to show that

information is at the root

of all fields of science.

These fields may be generated

by use of the concept of

“extreme physical

information,” or EPI. The

physical information is

defined to be the loss of

Fisher information that is

incurred in observing any

scientific phenom-

~~Fisher Information~~ — an
overview | ScienceDirect
Topics

Definition. The Fisher information is a way of measuring the amount of information that an observable random variable X carries about an unknown parameter θ upon which the probability of X depends. Let $f(X; \theta)$ be the probability density function (or probability mass function) for X conditional on the value of θ . It describes the probability that we observe a given outcome of X , given a known

Wikipedia

The Fisher information measures the localization of a probability distribution function, in the following sense. Let $f(\theta)$ be a probability density on \mathbb{R}^N , and (X_n) a family of independent, identically distributed random variables, with law $f(\theta, \theta)$, where θ is unknown and should be determined by observation.

Extreme physical information
(EPI) is a principle in
information theory, first
described and formulated in
1998 by B. Roy Frieden,
Emeritus Professor of
Optical Sciences at the
University of Arizona. The
principle states that the
precipitation of scientific
laws can be derived through
Fisher information, taking
the form of differential
equations and probability
distribution functions
