It is important that you keep the pH level of your aquarium below 8 for any kind of shrimp. A pH level range of 6-7 is generally the sweet spot for any kind of shrimp. Add hiding place to the tank. Keep plenty of hiding spaces available for shrimp in your aquarium. This is important as it will give a little shrimp place to hide when they are newborns.

These shrimp grow to a maximum around 1 ½ inches in length and they are peaceful and moderately easy to keep. Red cherry shrimp are excellent scavengers, feeding on algae as well as organic debris, and they tend to thrive best in heavily planted tanks. These shrimp will breed in the aquarium as long as one male and one female are present.

*The Top 5 Shrimp for the Freshwater Aquarium*

These freshwater shrimps thrive in planted aquariums with a water temperature of 70-80°F and a pH of around 6.0-7.0. Breeding in captivity is not very common as the fry hatch in saltwater before returning to freshwater as they grow. 5. Red Cherry Shrimp.

Substrate should be pH neutral (inert) or an aquatic plant medium. There are a number of substrate materials designed specifically for dwarf freshwater shrimp keeping. Mature aquariums are preferred as they are more stable and tend to have natural food sources for shrimp; never place dwarf freshwater shrimp in a newly set up aquarium! Freshwater Shrimp Behavior/Compatibility. Dwarf freshwater shrimp are active and almost always engaged in harvesting algae or some other food source.
